(54) Title: MENU SYSTEM

(57) Abstract: A menu system includes a display means for displaying game data to a number of available casino games playable by a player at an online casino. The display means is switchable between an overview mode and a detailed mode. The game data relating to any game that is displayed in the detailed mode is a superset of corresponding game data displayed for the same game in the overview mode, and the available games for which game data is displayed in the overview mode being a subset of the available games for which game data is displayed in the detailed mode. The menu system includes a categorisation facility that is operable to categorise the number of available casino games playable by the player into a number of different game categories. The game data displayed by the display means is sorted by game category and the number of game categories in the detailed mode is greater than the number of game categories in the overview mode. The game categories in the overview mode

include games that are preferred by the player, games that are recommended to the player for play, and games that are new to the online casino, while game categories in the detailed mode include jackpot games offered by the online casino, table games offered by the online casino, video poker games offered by the online casino, slot games offered by the online casino, games that are preferred by the player and games that are recommended to the player for play.
